

Make disturbed soils productive

Establish native species and seeded grasses permanently

H-Start is a custom-blended probiotic soil inoculant for reclamation of well or mine sites, forest blocks, and municipal land.

Improve plant establishment in land with:

- Saline soils
- Soil compacted by heavy equipment usage
- Low organic matter and nutrients
- Lack of microbial biodiversity

H-Start Reclaim for the reclamation of degraded land

- Easy to use
- Better establishment
- Faster results means fewer applications

Success starts with the roots

Strong roots and resilient plants

Strong, high-mass roots improve:

- Plant emergence
- Establishment rates
- Seedling survival rates
- Stress resilience
- Year-over-year plant regrowth
- Soil stability

Application Options

Application rate of 200 kgs/ha. This is a standard application reference rate. Contact us for a customized rate recommendation for your specific reclamation project.

BROADCAST

Broadcast and incorporate into the top 5 cm (2") of soil prior to planting

BANDED

Banded at a depth of 2-5cm (1-2") prior to planting

HYDRO SEEDING

Suspend H-Start in application solution with tackifier and maintain constant agitation

SEED PLACED IN FURROW

Apply in furrow at seeding
